**AUSMON RESOURCES LIMITED ("Ausmon")  
QUARTERLY ACTIVITIES REPORT  
31 MARCH 2009**

**Highlights**

- Successful capital raising
  - \$1.4 million in seed capital
  - \$2 million in a fully subscribed Initial Public Offering.
- Ausmon admitted to Official List of ASX Limited and trading of Ausmon securities commenced on 31 March 2009.
- Entered into a farmin agreement to earn an 85% interest in each of four Exploration Licences (EL) in New South Wales.
- Acquired 100% interest in EL 26007 exploration licence in Northern Territory.

**EL 6413, EL 6415, EL 6416 and EL 6417 in NSW  
Farmin to Earn 85%**

On 11 February 2009, Ausmon entered into a farmin agreement with Robust Resources Limited and Robust Operations Pty Ltd ("Robust") to earn an 85% interest in each of four NSW ELs, namely EL 6413 (Pooraka), EL 6415 (Tindarey) and EL 6416 (Mt Barrow) near Cobar, and EL 6417 (Cumnock), near Orange. Robust retains a 15% free carried interest in each EL until Ausmon earns its 85% interest therein, and thereafter exploration and development expenditure will be shared on a pro rata basis by the partners.

Under the agreement, the Company will spend a minimum total of \$250,000 per tenement year on the four ELs for 3 tenement years ending on 16 May 2011 (including the current tenement year 2009), with a right to withdraw after 2 years in 2010. Robust is Operator of the Joint Venture, with an Operating Committee comprising of two members from each Joint Venture partner, chaired by a representative of Ausmon. The joint venture agreement was registered with the DPI on 6 April 2009.

**Work Undertaken**

Since January 2009 the Operator has continued work steadily towards meeting the ELs time and expenditure requirements. Encom Group was initially commissioned to filter and process available regional aeromagnetic data- reduction to pole, edge, tilt, etc. This was done to assist with relinquishment area selection and target enhancement. Other

work undertaken is described below. NSW EL work and expenditure commitments for the current tenement year 2009 are largely met at the date of this report.

### **Cobar ELs (Pooraka EL 6413, Tindarey EL 6415, Mt Barrow EL 6416)**

A programme of intensive field work was undertaken on the above 3 Cobar ELs by Dr PG Moeskops (GM Technical of Robust) during March 2009. Targets consisted of earlier delineated geochemical, geophysical and geological "hot spots" mostly requiring shallow (2 to 16m) bedrock sampling by air core drilling.

#### **Air Core Bedrock Sampling**

In all 435 holes were drilled (78 holes in Tindarey EL, 139 holes in Mt Barrow EL, 218 holes in Pooraka EL - for a total of 2,094 metres - average depth 4.8 metres). Holes were planned to be 4 to 8 metres deep, with a 2 metre sampling interval, but in highly silicified and ferruginised places - e.g. at Chert Ridge on Pooraka EL "refusal" at shallow depth (1 to 3 metres) was not uncommon. In most cases 1 Kg cyclone splits were collected from the bottom 2 metre of holes.

#### **Mapping/ Prospecting/Rock Chip Sampling**

A total of 40 samples were collected, mainly from the Golconda and Mt Merrere gold diggings on Tindarey EL (26 samples) plus several anomalous spots on Pooraka EL (8 samples). The remaining 6 samples were of hard outcrops at proposed air core sites.

#### **Chemical Analyses**

The above samples - 475 in all - were dispatched to ALS Chemex Labs in Orange to be dried, crushed, pulped and analysed for Au (AA 21), Ag, As, Sb, Cu, Pb, and Zn (ICP 41). Results will be reported shortly.

#### **Cumnock EL 6417, near Orange**

An extensive (10 square kilometres, 850 samples) programme of soil sampling was begun in the southern (Gumble) segment of the EL. This was designed to cover skarn prospective granite/ country rock contacts and/or possible extensions to the earlier drilled (Robust- 2007) Delaney's Dyke Zn-Ag-Cu-Au mineralisation. Orientation sampling was initially undertaken (20 samples/ 3 sieve fractions) and results (Au, Cu, Pb, Zn, Ag, As, Sn, P and Bi) evaluated.

Additional soil and rock chip sampling programmes are planned in Blathery Creek/ Owens Shaft "disseminated Cu" segment of the EL, and possibly in the northern "Neurea Cu Zone" segment. This work is scheduled for completion by 16 May 2009 for inclusion in the EL Annual Report.

## **Renewal of the Four NSW ELs**

The EL areas to be renewed (following 50% reduction) were selected, and the Renewal Applications and fees were dispatched, in correct format, to the NSW Department of Primary Industry ("DPI") on 16 April 2009, one month before expiry of the ELs.

The expectation is that, since the above work programmes meet DPI requirements in terms of commitment, timing and expenditure, the ELs will be renewed for another 2 years. The renewal process however involves study of all EL Annual Reports by the DPI, and can therefore take time to complete.

The EL Annual Reports are due for lodgement with DPI by 16 June 2009 and there will be adequate time to evaluate the data collected over the past 2.5 + years and to design effective exploration programmes involving a substantial proportion of air core and RC percussion drilling of targets.

## **EL 26007 (Mary River) in NT 100% interest**

On 17 February 2009 Ausmon entered into a Deed of Assignment to acquire 100% interest in EL 26007 (Mary River). Transfer of title in the EL to Ausmon was registered by the Department of Regional Development, Primary Industry, Fisheries and Resources of the Northern Territory Government on 10 March 2009.

No exploration work has been carried out on the EL during the quarter.

*(The information in this report that relates to Exploration Results with respect to the NSW ELs is based on information compiled by Dr Pieter Moeskops, the Principal of Agaiva Holdings Pty Ltd and a member of The Australasian Institute of Mining and Metallurgy.*

*Dr Moeskops has sufficient experience that is relevant to the style of mineralization and type of deposit under consideration and to the activities he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Dr Moeskops consents to the inclusion in this report of matters based on his information in the form and context in which it appears.)*

## Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
